EXPERIENCE

PlanetScale, Remote —Software Engineer

December 2021 - October 2022

- Work directly with the product team and marketing team on various projects and goals, including the main website and portions of the app.
- Implement new features and designs from the design team and design system. As well as, set up a core component library using Storybook and Chromatic to share across the website and app.
- Created landing pages and custom websites for individual marketing campaigns and internal tools.

OCV LLC, Opelika, AL—Web Developer

September 2020 - December 2021

- Maintained and led major existing projects, such as an internal and client-facing management portal and Children's Oncology Group App (GraphQL & REST API on AWS).
- Designed a major overhaul of current websites and systems to allow for best practices and a smoother developer workflow and keep the team's development timely and consistent.
- Work directly with lead and CTO to create and architect OCV Connect, our management portal. Maintained this project and created a custom drag and drop builder for client websites and apps using our feature set.
- Implemented Micro-frontend Architecture within the web team's projects using Module Federation to simplify the deployment, integration, and orchestration of all new and existing features.
- Established software industry standard practices within the company's web team, as well as led and managed Junior and Part-Time developers.
